(A)

ATLAS

SAFE. POWERFUL. RELIABLE.

BUILDING ON TECHNOLOGY - High-tech excavator for use on rails

ATLAS rail-road excavators were especially developed for use on rails and combine optimum mobile excavator technology with the most up-to-date know-how for rail use. This is your guarantee for top performance, even with difficult track conditions.

We were the first to put an excavator on rails in 1965. We were market and technology leaders in this field back then and still are today. As the sole world-wide supplier, we offer the computer assisted rail contact pressure system (CARSY). We are the sole manufacturer in Europe of rail-road, short tailswing excavators with a swing radius of less than 2000 mm. We can offer any chassis configuration to fit any rail network for our world-wide customers.

Take advantage of our many years of know-how and experience for your application: on rail, alongside the track and mounted on the railway wagon.

The right choice every time We offer rail-road excavators of two types.
In particular, the excavators comply with the
latest construction requirements of the
German Federal Railways

1404 ZW with the CARSY-System

17 - 20 t 75kW (102HP)

Tailswing: 1575, 1750, 2000 mm

1404 Friction wheel

16.5 - 17.5 t 75kW (102HP)

Tailswing: 1575, 1750, 2000 mm

1604 ZW with the CARSY-System

21 - 22 t 95kW (129HP)

Tailswing: 1750, 2000 mm

The rail-road excavator

A PLEASURE IN OPERATION

Safety, power and fast and comfortable operation set our rail-road excavator apart, making it amongst the most pleasurable machines to operate on rail or on site.

Speed - working faster than ever

- The required pressures on the rail guidance wheels are automatically set when the 1404 ZW and 1604 ZW are re-railed. No awkward external adjusting screw to set the contact pressure on the tyres.
- Innovative AWE 4 technology for sensitive, proportional control of all movements irrespective of load. Travel and work simultaneously. This is the big advantage to you.
- Front and rear wheels can be controlled independently (not with the friction wheel version).
- Simple de- and re-railing ensure high operating comfort for fast, safe and efficient operation.

Tractive force

• Faster on the construction site: the enormous power allows you to use our rail-road excavator as a "shunting locomotive". Both models are approved for 40 T un-braked trailer weight and 120 T braked trailer weight. We can also supply with a wagon brake on request.

Precise operation - optimised for the track

- 4 outrigger stabilisers (with the 1604 chassis) adapt optimally to the rail embankment.
- Customised specification: tailor your excavator precisely to your requirements from the various superstructures and chassis, for example the superstructure of the 1404 ZW can be mounted on the chassis of the 1604 ZW for maximum stability with ultra short tailswing.
- Counterweights suitable for the application can be rapidly changed.
- The loading gauge for wagons is met.

A space-saver - great when it gets tight

- · Rail-road excavator with ultra short tailswing. Choose between the different counterweight options.
- The 1404 ZW features the shortest tailswing on the market at 1575 mm making it suitable without restriction for any spacings between rail tracks.
- For narrow gauge tracks, use the 1404 ZW rail-road excavator friction wheel with its up to 1000mm narrow axles.

Reliable - because every minute counts

Our market leadership is based on our well-proven technology - tried and tested a thousand times over in the most arduous applications. High-tensile steels, robust electric and electronic components as well as excellent workmanship in all hydraulic components ensure that the excavator is the reliable heart on any construction site.

You work, we protect

THOROUGHLY DESIGNED

Stability

• Low centre of gravity ensures optimum stability in operation.

Assisted by a transverse mounted engine.

Safe on rails

- The outriggers are automatically lifted when the "drive" function is selected. This avoids damage during rail operation.
- Continuous monitoring of contact pressure. (not friction wheel version)
- The air reservoirs of the wagon brake are located in the superstructure and chassis and are very well protected.
- · De-railing of the bogie by the outriggers is automatically eliminated.

Electronic swing and height limitation

- Computer assisted swing limitation, which proportionally reduces the superstructure speed electronically when the limit is reached.
- Electronic height limitation eliminates the risk of the excavator boom from coming into contact with obstacles above such as power cables. The maximum articulating boom height, relative to the point of reference, is taken into account. The system recognises whether the clamshell or bucket are fitted and adjusts the programmed operating height accordingly. The motion stops when the programmed limit is reached.
- Swing and height limitation can be comfortably programmed from the operator's seat. It is not necessary to get out of the machine.

Emergency de-railing

- Emergency de-railing is permanently available and doubly protected. Firstly by connecting the hydraulics to the cigarette lighter via an electric cable. Secondly by a fixed emergency hydraulic hand-pump.
- An electric emergency pump is available as an option.
- Emergency lowering of the rail bogie is permanently available.

ATLAS

Superstructure - highlights

Engine

POWER

Deutz turbo-charged engines provide fast and powerful motions, a powerful drive train, fast cycle times and dynamic development in performance.

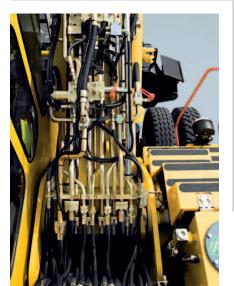

Outstanding engine characteristics:

- Exceptional power development from 1500 rpm.
- Turbo-charged with intercooler.
- Maintenance friendly filter change.
- High degree of comfort thanks to the low noise level.
- Low operating costs through exceptional fuel efficiency and low maintenance costs.
- · Current emission standards are met.
- Option: automatic idle running. When the excavator is not working or moving, the engine speed automatically reduces and fuel consumption is lowered.

Hydraulic system

PRECISION CONTROL

- The rail-road excavators are fitted with well-proven load-sensing hydraulics.
 Our intelligent AWE 4 hydraulic management system allows simultaneous movements to be carried out irrespective of load. For more productivity and safe operations.
- The power you need, at the right time.
 For fast cycles or high lifting capacity: our load-sensing system attunes the method of operation of the excavator exactly to your application.
 For greater economy you save fuel and maintenance costs.

What you should also know

- Primary and secondary overload protection.
- Suction valves for all operating functions.
- Overload lock valves, precision lowering valves and travel brake valve.
- Pipe break protection valves for lifting cylinders.
 Optionally also on adjusting and articulating cylinders.
- Emergency steering and pressure reservoir for emergency lowering of the boom system.
- Proportional control of attachments by slider in joystick in the 1604ZW as standard.

Cab

FAR-SIGHTEDNESS

Our roomy two-man cab is the largest on the market and provides everything you need to work comfortably and efficiently.

The cab with more view

- Two-man cab with excellent all-round vision.
- Optimum lay-out of the controls provides clear view of the attachment.
- Optional: rear view monitoring with camera and display.

Welcome to the "Feel-good" workplace

- The cab is very well isolated from vibrations.
- The sound pressure level is very low thanks to the high quality sound insulation.
- Air conditioning is standard including a defrosting function for fast de-misting and de-icing of the windscreen.
- The air-cushioned operator's seat is individually adjustable in all movements.

 Backrest, lumbar support, cushion length and angle can all be easily adjusted.
- The narrow steering column gives excellent vision to the attachment and the rail bogie.

ATLAS

Chassis - Highlights

GUIDANCE FORCE

Numerous components ensure safe and strong contact between chassis and rail.

Go into (rail) guidance mode

Our CARSY system (Computer assisted rail contact pressure system) electronically ensures the optimum pressure on the rail is maintained continuously and automatically.

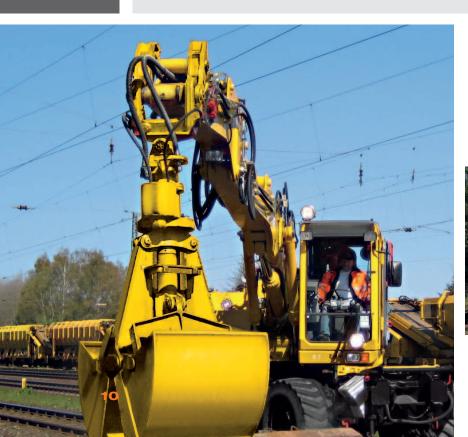

- The required pressures are automatically set, continuously monitored and adjusted if necessary.
- The front and rear bogie wheels can be independently switched to permit simple de-railing and positive by-passing of rail points.
- · Automatic self-diagnostics of the electronics.
- Available for 1404 ZW and 1604 ZW models.

Operation at the optimum level

 Continuous self-levelling of the rail running gear ensures smooth movement of the rail-road excavator when travelling on rail.

Optimum grip

- Bogie axle box with optimum oscillation in the axle mountings.
 The successful result: safe operation especially on uneven construction site tracks and in cornering.
- With the friction wheel model, traction is provided via a non-slip friction roller.

Stable

The low centre of gravity and our compact design guarantee high stability with excellent off-road mobility. 1604ZW also has a bilateral barrier on the track wheel cylinder at a swing of 5 ° from the longitudinal axis and at a standstill.

First choice

The right chassis for any application: with or without outriggers with different track gauges and different wheelbases.

Driving power

Whether in crawling speed or top speed – the high torque drives the excavator quickly and safely through any terrain, assisted by the well-proven traction characteristics of our tires. The sensitive power assisted steering on the oscillating axle transforms any rough terrain into a "straight road". Even at high-speed road travel, the 04 series impresses through its road holding and thereby provides excellent handling characteristics. Further, 1604ZW has a traction increase at the push of a button that if needed increases the contact pressure of the drive wheels on the track by about 20%. The so-optimized driving leads to improved load starting.

The chassis incorporates robust, specially designed excavator axles with planetary drives in all 4 wheel hubs. All-wheel drive, a variable displacement motor (1604ZW with power shift transmission) and a double-action brake valve are standard.

Reliability - here we are playing it safe

- Tie-down lugs for fast and safe securing of the excavator for transport on rail or road.
- Steering axle with automatic oscillation lockout to allow travel with heavy loads in any terrain. Activation of the lockout either automatically when braking or manually.

Other safety aspects

- Brakes: wet, maintenance-free multi-disc brake
- Excellent emergency steering characteristics

ATLAS

Attachments-Highlights

SELECTED

All components are designed for high lifting capacity, optimum handling curves, fast working movements and travel speeds. The design advantages of our arms lie in our well proven welding methods. They are lighter while maintaining the same robustness.

Large choice booms and sticks

Lifting capacities, ranges, breakout and ripping forces can be adjusted for the specific task through a wide selection of boom/stick combinations.

Adjustable boom

Our variable adjustable booms, which can be extended and retracted hydraulically, provide for loading and reaching at great height.

Sticks - specially developed for rail laying

Our special stick can be fully extended for maximum height of lift under the cat wire.

Long-life cylinders

Every cylinder is designed for maximum power, taking the size of the machine into account. The high level of buckle resistance, the high-quality surface finish of the piston rod and special sealing systems all contribute to long service life.

Equipment-Highlights

PROFESSIONAL ATTACHMENTS

Manufacture of both our standard and special attachments takes account of state-of-the-art developments in machine building and steel engineering. High-strength steels, proven technology and decades of experience result in work that is cost-effective and practice-based.

Buckets

All especially well worn parts are made of high-strength, hardened and tempered fine grained steel. The easy penetration is achieved through the fine cut based on the slightly conical shape of the bucket. The tooth holders are held particularly flat and are integrated into the cutting edge. This creates less digging resistance and enables more working cycles. We also have different teeth shapes for different types of ground.

Grabs

The right grab for any job – the multifaceted palette includes devices with single or multiple cylinders as well as double or multiple shell models. The models are made up of graduated base types and a series of assigned shell sizes. All grab types are designed for maximum closing pressure and excellent filling performance. The grab rotating hydraulics are standard.

Special attachments for use on rail

- Multi-functional rotator for bucket tools
- Short design double clamshells for digging between sleepers
- Short design gravel grab
- · Sleeper replacer with hydraulic sleeper grab
- Mulcher
- Tamping attachment
- · Keyhole shears/keyhole saw

Optionally, all additional hydraulic attachments can be controlled by an easy to use pressure balance.

The greatest flexibility - quick attach systems

Our quick attach systems give you the highest flexibility when selecting the required attachment. The simple and robust design of our mechanical and hydraulic quick attach system helps you retool with the least amount of effort in the shortest possible period of time.

Service and maintenance

SIMPLICITY

Simple and convenient maintenance of the machine to preserve the residual value

Designed for ease of service

- Service-friendly maintenance flaps make work easier.
- All lubrication points for the rotating assembly and the arm equipment are consolidated.
- For oil monitoring all the main components are directly visible and, like the battery, easily accessible.
- To enable the machine to be quickly checked by our customer service technicians, monitoring points have been placed at all operationally relevant positions.
- Good maintenance: the CARSY system records operational data, which can be quickly and easily read by our service personnel.

Expert service partners

Our dealers' customer service staff undergo intensive technical training at our works, so that they can provide you with expert advice whenever you need it.

The hydraulic oil filter

The special process which we have adopted enables the filter basket to be repeatedly re-used. Only the 'lifetime' filter element needs to be changed. This is good for the environment and significantly reduces the costs of disposal.

Long service life

Your Terex® Rail-road excavator has a long service life.

Please make sure that servicing intervals are adhered to and original spare parts are used.

Approvals

The equipment marked * is an essential requirement of the German Federal Railways for operation on their network.

The safety testing is conducted by the health and safety executive

(Berufsgenossenschaft), compliance with the appropriate regulations is verified by the German Federal Railways and the TÜV.

Additional and special equipment

- Short tailswing version (1575, 1750, 2000 mm tailswing)*
- Two-man cab*
- Auxiliary heating

Tailswing 2000 mm

- Narrow axles for underground and suburban railways
- · Combined check point for ease of filter maintenance
- · Hose-rupture safety device for lifting operation, overload warning device
- Trailer hitch on chassis*
- Emergency manual hydraulic pump*
- Special tow bar*
- German Federal Railways approved lights*
- · Lift limitation electronically adjustable from the cab*
- Swing limitation adjustable from the cab*
- Wagon brake unit with footplate brake valve, permitted trailer load is 120 t
- Factory Federal German Railways approval with appropriate certification and all necessary accessories: fire extinguisher, first aid kit, earth cable, red/white flag, torch with red dimmable light, loud hailer, digital speed measurement instrument, oil spill tarpaulin and oil binder*
- Rotating beacons
- Working floodlight(s)
- · Radio/CD/MP3, front AUX in, USB
- Refueling pump
- Rail bogie with track gauges of up to approx. 1700 mm
- TÜV-approval

Items marked with * are a requirement for Federal German Railway approval

 $a = travel \ on \ road \ permitted, \ b = travel \ on \ rail \ permitted, \ q = lateral, \ l = longitudinal$

All values in tonnes (t) were determined acc. to ISO 10567 and include a stability factor of 1.33 or 87% of the hydraulic lifting capacity. These values are applicable at the top of the arm with optimum positioning of the corresponding boom system.

Rail quidance

Track gauge 1435 mm, other widths on request.

CARSY (Computer assisted rail contact pressure system)

Automatic system for regulating and monitoring the force of the rail guide wheels. The required pressures are automatically set, continuously monitored and adjusted if necessary. Depending on the pre-selected operating condition, each separate guidance bogie wheel is set to a different pressure in accordance with a prescribed schedule, locked or hydraulically trailed.

The front and rear bogie wheels can be independently switched to permit simple de-railing and positive crossing of rail points.

Automatic self-diagnosis of the electronic system. Emergency function: derailing is assured even in the event of a fault or complete breakdown.

Operating weights, tailswing

Туре	Configuration	Operating weight with boom adjust- ing mechanism	Tailswing mm	Can be operated on the network of the German Federal Railways.
1604 ZW, with 4 outriggers	A67.5	approx. 21.0 t	1750	Track spacing ≥3700 mm
1604 ZW, with	A67.5	approx. 21.5 t	2000	Track spacing

Approvals

The equipment marked * is an essential requirement of the German Federal Railways for operation on their network.

The safety testing is conducted by the health and safety executive (Berufsgenossenschaft), compliance with the appropriate regulations is verified by the German Federal Railways and the TÜV.

Additional and special equipment

- Short tailswing version (1750 or 2000 mm tailswing)*
- Two-man cab*
- · Auxiliary heating
- Hose-rupture safety device for lifting operation, overload warning device*
- Trailer hitch on chassis*
- Emergency manual hydraulic pump*
- Special tow bar*
- German Federal Railways approved lights*
- · Lift limitation electronically adjustable from the cab*
- Swing limitation adjustable from the cab*
- Wagon brake unit with footplate brake valve, permitted trailer load is 120 t
- Factory Federal German Railways approval with appropriate certification and all necessary accessories: fire extinguisher, first aid kit, earth cable, red/ white flag, torch with red dimmable light, loud hailer, digital speed measurement instrument, oil spill tarpaulin and oil binder*
- Rotating beacons
- Working floodlight(s)
- Radio
- Refueling pump
- Rail bogie with track gauges of up to approx. 1700 mm
- TÜV-approval

Items marked with $\ensuremath{^*}$ are a requirement for Federal German Railway approval
