

Hydraulic Crawler Crane

**FWX 135**

**Fuwa Heavy Industry Co.Ltd.**

## Foreword

Thank you for your interest in our products.

Fuwa Heavy Industry Co. Ltd. is one of the oldest manufacturers in the heavy equipment industry. Our history goes back to 1904. Today Fuwa is a modern contender on both the Chinese domestic market and the advanced International market.

A team of experts and engineers has reset the concept of crawler cranes by searching the optimum in international design and technology combined with the dedicated manufacturing in China.

The use of our long term experience combined with modern computer design, calculation and simulation software, enabled us to reach the best to meet the customers demand.

New standards on safety, quality, performance, reliability, easy transport and maintenance have been implemented. We respect the environment by efficient used of true materials, high quality components and aim a long life time.

The unique concept of Modular Design offers a large variety of models, but always based on the same key values.

## FWX135 Features

Modular design for optimized performance and efficient maintenance by innovative layout of hydraulic and electric system. High-grade steel boom and machine structures thoroughly engineered and analyzed. High Performance winches with 22 or 26mm wire rope and optional free fall functions for special applications.

Life-Cab; high ergonomics comfort cab, 20% more vision offered by flat and easy maintenance windows, 20% larger door entrance. Self-assembly devices for safe and efficient assembly of track-frames, counterweights and boom foot. Jack-up cylinders in drop and jack-up style for safe lifting the base machine.

Powerful traction and good stability when traveling, even with 100% load. Logic organized control consoles, with enhanced monitor display, lightning strike protected, GPS locator. Enhanced Moment Limiter system with multi-function display including machine diagnostics. A solid state-of-art electronic compartment hosts all electric functions in a fix setup for fast checking and maintenance.

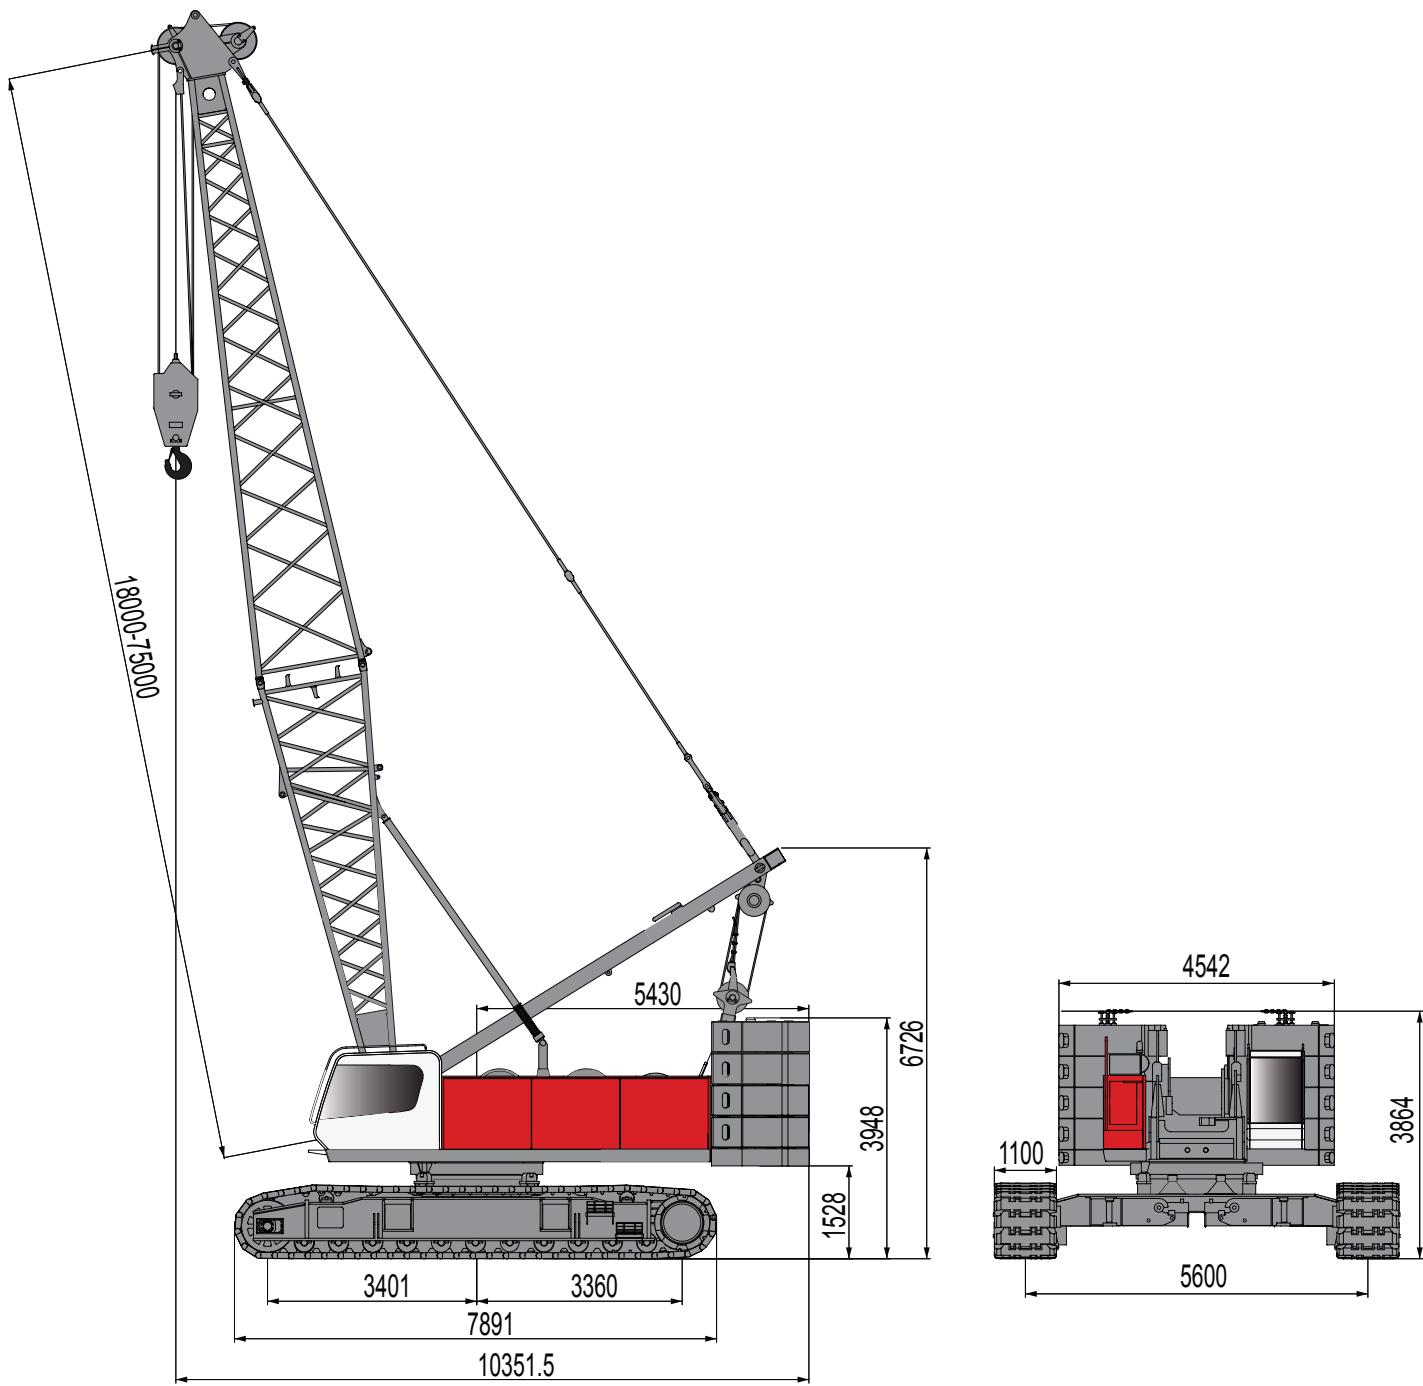

Excellent transport possibilities of the main structure with a width of just 3 meters. Main boom inserts of 3m, 6m and 11,6m allow containerized transport. Multi-configurations and options to serve various markets and applications to meet most different requirements.

The FWX machines carry the new Fuwa Signature of quality;  
respect the past, aim the future.

## Technical Data

Items	Unit	Data	
Max.rated lifting capacity	t	135@5m	
Main boom length	m	18~75	
Fly jib length	m	13~31	
Main boom+ Fly jib max.length	m	63+31	
Main boom+ Luffing jib max.length	m	48.5+49	
Boom derrickng angle	°	30~84	
Hook blocks	t	135/80/25/12.5	
Working speed Rope speed	Main winch hoist, lower (rope dia.Φ26mm )	m/min	120
	Aux. winch hoist, lower (rope dia.Φ26mm )	m/min	120
	Boom hoist, lower (rope dia.Φ22mm)	m/min	48
Swing speed		r/min	2.7
Travel speed		km/h	0-0.78/0-1.15
Reevings		12	
Single line pull	t	12.5	
Gradeability	%	30	
Engine	kW/r/min	209/2000( export ) 225/2000( domestic )	
Swing radius	mm	5530	
Transport dimension	mm	13680×3300×3330	
Crane mass(with basic boom, 135t hook)	t	130	
Ground bearing pressure	MPa	0.08	
Counterweight	t	54	

## Specifications

• • • •

### Engine

Cummins QSL9 EU3 emission, direct injection, water cooled, 209kW(280HP) at 2000rpm, 24V voltage.  
Dong Feng Cummins 6LTAA8.9, National II emission, 225kW(300HP) at 2000rpm.

### Hydraulic system

Rexroth main pump: main power adjustment, at the same the load feedback function can be realized. Have the function of micro-speed.  
Domestic main pump: main power adjustment, at the same the load feedback function can be realized.  
The hand grip control meets the ISO standard, Max. control pressure: 320bar  
Hydraulic oil tank capacity: 500L

### Swing system

Inner gearing swing drive, independent closed swing system, 360°rotation.  
Swing locking: hydraulically swing locking, ensure to lock the upper structure when finish the operation and during the transportation.  
Swing float: make sure the boom center and gravity of load be in the same plane. To avoid wiggle happens after lifting the load.  
Brake: automatic brake mode; spring applied, hydraulically released disc brakes. Swing speed:

### Upper structure

Extreme durable and lean design, fully computer aided designed and optimized.  
Made of high grade steel for long life time. All components are well organized mounted  
In the spacious engine and hydraulic compartments.  
Excellent access by large doors for easy maintenance.  
Cover top plates made of aluminum to offer anti-skid safety and resist sun and rain.  
Counterweight: 54t

### Electric system

24Volt system with comprehensive layout and high grade wiring.  
Premium quality connectors and switches for best safety and reliability.  
Well organized electric switch board in sliding box for easy maintenance.  
Canbus monitoring system of engine and moment limiter are as option available.

### Main winch1&2

Each winch is driven independently by a hydraulic piston motor.  
Each motor is equipped with counterbalance valves to provide controlled load lowering and prevent accidental load drop if the hydraulic pressure is suddenly lost.  
Automatic brake mode, spring applied, hydraulically released, multiple-disc type brake.  
Drum: line type drum, to ensure no rope disorder even when more layers.

### Winch 1 & 2

Single line pull	12.54t
Rope diameter	26 mm
Line speed	0 ~ 120m/min

### Derrickin winch

Driven independently by a hydraulic piston motor provided with counterbalance valves.  
Automatic brake mode, spring applied, hydraulically released, disc type brake.  
Mechanical drum pawl lock supplies full orientation brake.

### Derrickin winch

Single line pull	10 t
Rope diameter	22 mm
Line speed	48 m/min

### Undercarriage

Each track is independently driven by a hydraulic piston motor. Spring loaded hydraulically releasable, automatic type, disc brake.  
Traveling speed: 0 ~ 1.33km/h

## Machine Configuration

Main boom 

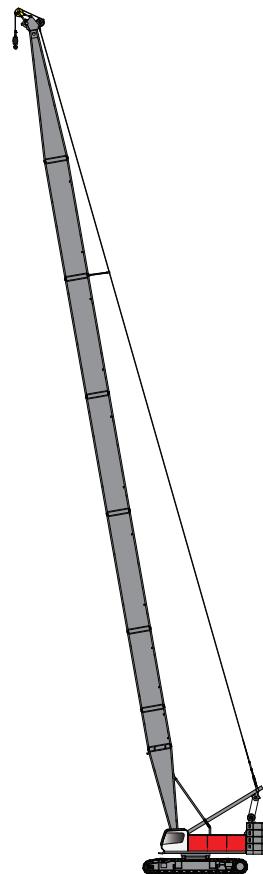

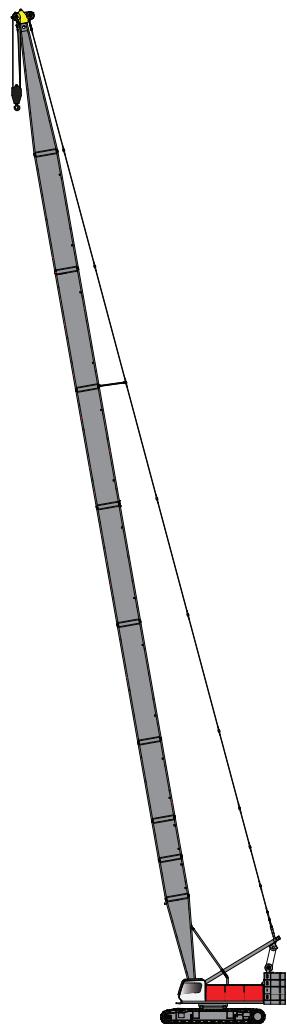

Max.lifting capacity:135t x 5m

Max.boom length: 75m

Runner 

Max.lifting capacity:12t x 16m

Max.boom length: 63m

## Machine Configuration

**Fly jib**

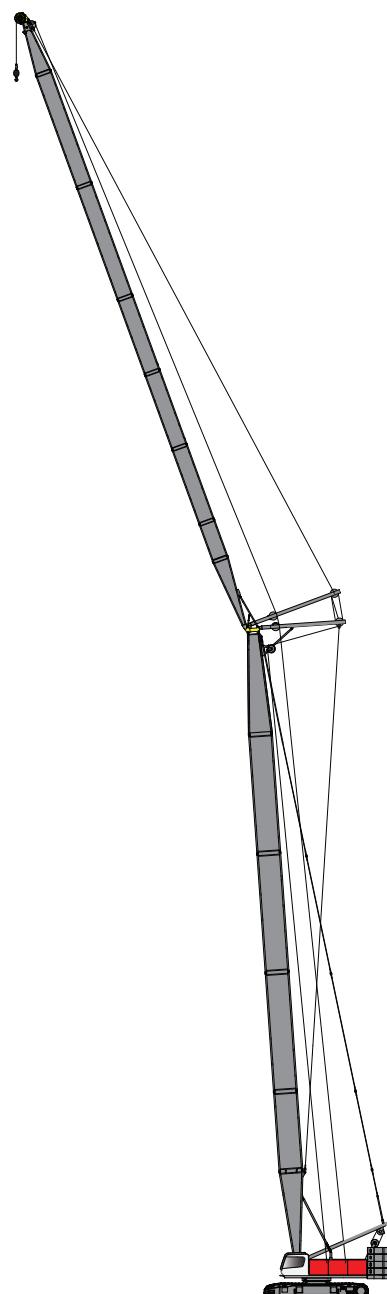

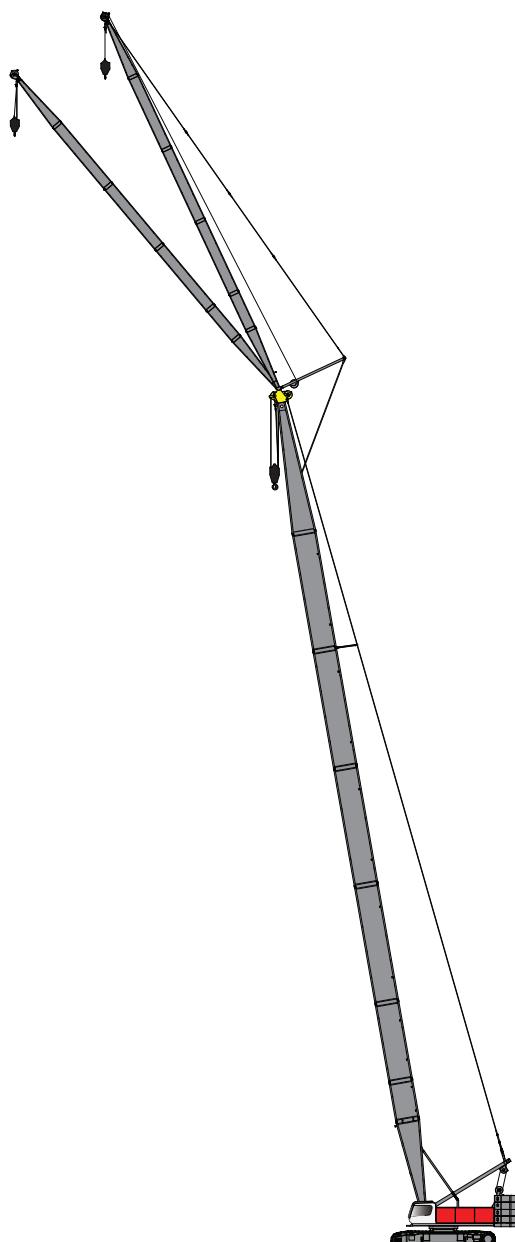

Max.lifting capacity: 14.6t x 14m

Max.boom length: 63m+31m

**Luffing jib**

Max.lifting capacity: 34t x 12m

Max.boom length: 48.5m+49m

## Notes for Load Chart

• • • • •

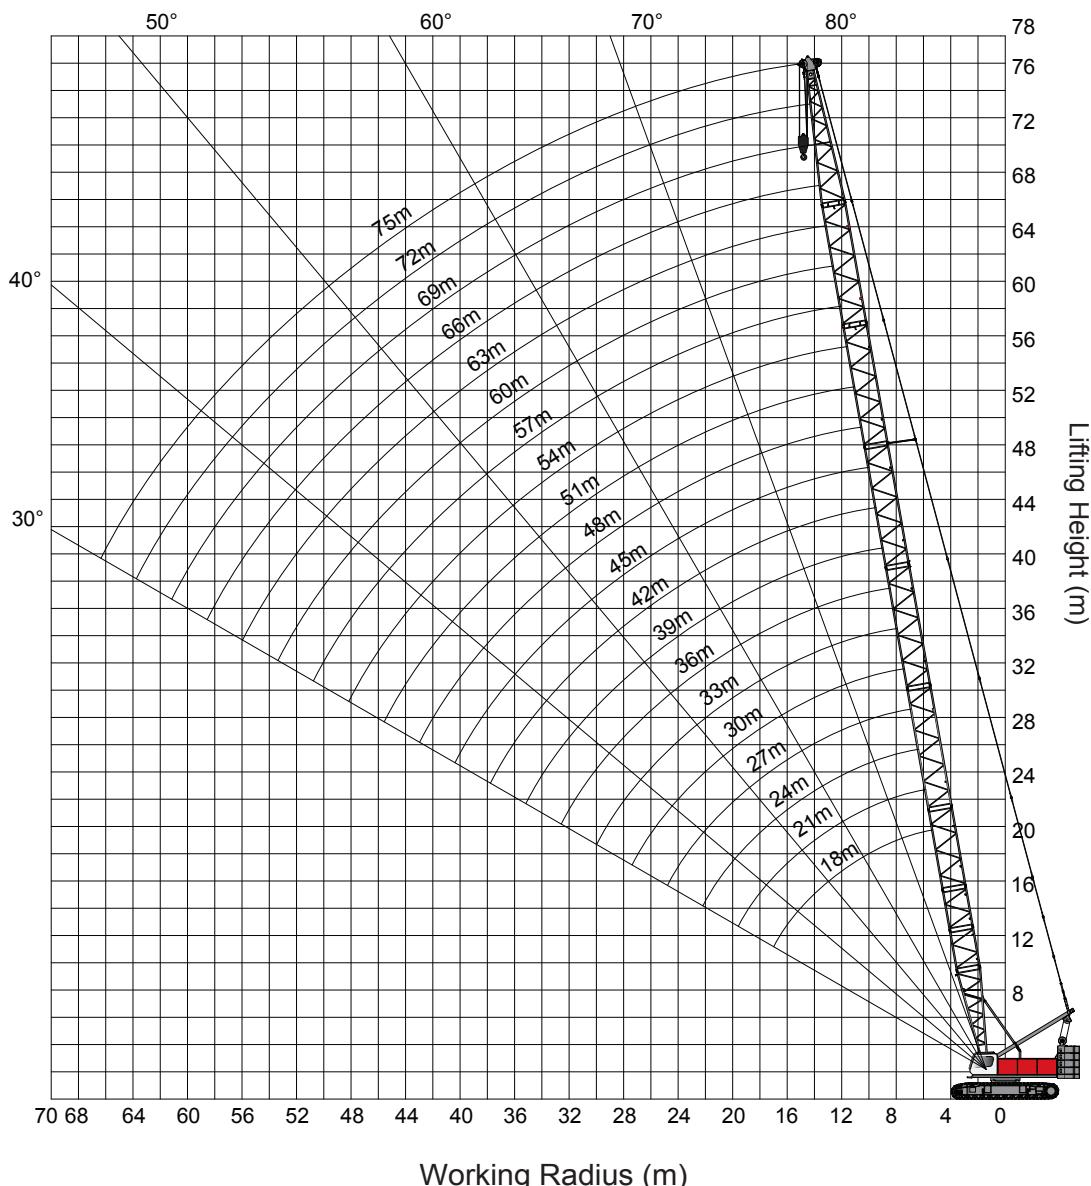

1. Ratings according to GB3811, ISO4302 and ISO4305.
2. The rated loads shown are based on the machine on firm level ground.
3. The rated loads shown are in metric tons , base on 75% of tipping load; and rear stability coefficient is not less than 1.15.
- 4.The user must deduct or limit the loads to allow for difficult conditions such as soft or uneven ground, out of level conditions, wind, side loads, pendulum action, jerking traveling or sudden stopping of loads. Weight of hook and slings should be deducted from the load chart (as shown below).
- 5.When mounted with runner or fly jib, the actual lifting capacity is the rated load deducting the weights of main and auxiliary hooks+runner or fly jib(shown in the table below). The crane can not work if the capacity deducted is less than 0.8t.
6. When mounted with runner, length of boom is 18~63m; when mounted with fly jib, length of boom is 39~63m; when mounted with derrick jib, length of boom is 33.5~48.5m.
7. Counterweight: 54t.
- 8.The radius in chat is actual working radius after lifting.
9. The lifting capacities below are for reference only. For actual lifting capacities please refer to the load chart in operator's cab or manual.

Jib length(m)	13	19	25	31	Runner
Weight (t)	1.5	1.7	1.9	2.1	0.2

Hook	Reevings Self-weight (t)	Reevings and max.lifting capacity (t)										
		12	11	10	9	8	7	6	5	4	3	2

## Safety Devices

• • • • •

### Hook and boom overhoist prevention device

Hook and boom over hoist prevention device are used for preventing crane damage or turnover due to overhoist

### Hook overhoist device

When the hook is lifted up as high as to touch the limit plumb, the microswitch will be activated and disconnected by the restoration of spring, cutting off the control circuit while the buzzer gives audible alarm and the indicator lights up. At the same time, the rise of the hook will stop automatically.

### Boom overhoist device

Boom upper limit angle is sensed and controlled by moment limiter and boom upper limit switch. When lifting, the boom angle reaches the upper limit of 80° or more, the moment limiter gives out visual and audible alarm, and transmits the signal, makes the boom stop rising. At the same time, boom upper limit switch operates, and whose circuit is cut off, and the boom stops rising.

### Moment limiter

The limiter can monitor the current load of all working attachments, the data of which can be set by buttons. 0% of rated load moment  $\leq$  load moment  $\leq$  90% of rated load moment, and the moment limiter proportion bar shows green. 90% of rated load moment  $\leq$  load moment  $\leq$  100% of rated load moment, and the moment limiter proportion bar shows yellow, at the same time, an intermittent audible alarm sounds. 100% of rated load moment  $\leq$  load moment  $\leq$  105% of rated load moment, and the moment limiter proportion bar shows red, at the same time, a continuous audible alarm sounds. Load moment  $\geq$  105% of rated load moment, and the moment proportion bar shows red, a continuous alarm sounds, at the same time transmits the signal. The main, aux.hook stops rising, boom stops derricking.

### Brake and locking device

Main, aux.drum brake, derrickng drum brake, swing brake and traveling brake.

### Sensor

Pull sensor, used for testing the pull. The angle sensor is installed on boom foot, used for testing boom angle. The mechanical angle scale is also installed on the boom foot, to show the current angle of boom.

### Swing alarm

Swing, at the same time, with buzzer alarm.

## Boom Combinations
