

FUWA HEAVY INDUSTRY CO. LTD.

QUY750

Hydraulic Crawler Crane

-Fuwa Series Large Crawler Cranes-

750mt lifting capacity

Super Lift, suspended counterweight,
super structure extender

Courtesy of Crane.Market

The New Fuwa QUY750 crawler crane has been designed to meet the latest demand in heavy lifting based on international safety and quality standards. Four distinguishing patents make the machine different and better. True experience of Fuwa, being one of world's oldest construction equipment manufacturer's, results in a solid piece of equipment which stands out in performance and flexibility.

Features:

- Special boom head for the wind power industry.
- New style 'fork-type' joints for connecting boom head and tapered sections.
- Modular from basic main boom, superstructure extension to full super lift with suspended counterweight.
- 6-row roller bearing swing circle.
- Center frame with integrated double swing drives.
- Ground bearing pressure monitoring system.
- Thunder protection device.
- Emergency remote control system.
- Black box machine data logger.
- Maximum lifting torque; 10454tm(With superlift counterweight).

Specifications

Super Structure

Engine

The crane is powered by a modern Cummins QSX15 Off-Road standard Diesel Engine, 6-cylinder, water cooled, rated power 418 KW/1800rpm, fitted with air pre-filter, dual-process air filter, muffler, cooler. Radiator and fan used are the designated accessories of Cummins. The transfer case provides drive via five variable displacement plunger pumps and two gear pumps to all function modules. Four 12V maintenance-free batteries together provide 24V power are equipped with a 75 Amp. air-conditioner generator. A 740L fuel tank for engine is mounted on the power station and the fuel level is shown by indicator in operator's cabin. ★For emission standard check your dealer.

Control system

Modulating electronic-over-hydraulic controls provide finest speed response directly proportional to control lever movement. Fault diagnosis system is built-in for troubleshooting. The dual-color touch screen enables operator to operate moment limiter. Automatic power control optimizes efficiency of the engine output. The controls adopt the Rexroth RC controller system, display, encoder, moment limiter and monitor system. Data transmission is conducted through reliable Controller Area Network (CAN)-Bus.

Hydraulic system

Under electronic-over-hydraulic control, the system consists of main circuit, control system, and auxiliary system. The main hydraulic components are from Rexroth. It adopts LUDV load independent flow distribution system, and electric proportional pilot control, smooth and accurate control. The system pressure is 35Mpa. The system is equipped with a hydraulic oil tank of 1800L, cartridge and hydraulic oil cooler. Each function is equipped with relief valves to protect the hydraulic circuit from overload or shock.

Main hoist winches

Normally, the basic machine is mounted with two hoist winches: main hoist winch and auxiliary hoist winch. Besides there is also an optional hoist winch available. The grooved drum is independently driven by variable displacement hydraulic motor via built-in planetary reduction gear that is compact-structured while easy to service. The brake is of "normally-closed" type.

Specifications

Main hoist device

Drum diameter : 650mm
Wire rope diameter : 28mm

Max. rope speed : 0~130m/min
Wire rope length : 1300m

Derricking winch devices

Grooved drums are independently driven by variable displacement hydraulic motor via built-in planetary reduction gear that is compact-structured while easy to service. The brake is of "normally-closed" type.

Main derricking device

Drum diameter : 650mm
Wire rope diameter : 28mm

Max. rope speed : (0~60m/min) x2
Wire rope length : 780m

Aux. derricking device

Drum diameter: 650mm
Wire rope diameter: 28mm

Max. rope speed: 0~130m/min
Wire rope length: 1300m

Superlift derricking device

Drum diameter: 650mm
Wire rope diameter: 28mm

Max. rope speed: 0~130m/min
Wire rope length: 1400m

Swing system

Swing system has a closed hydraulic circuit and the platform is driven to slew from 0 to 360 degrees at speed from 0 to 0.75rpm by two hydraulic motors via planetary reduction gear running in oil. The slew bearing has six rows of supporting rollers.

Swing speed: 0~0.75rpm

Counterweight

Central ballast: 95t, 6 blocks on 2 trays;

Rear counterweight: side hanging counterweight, 245t, 18 blocks on 2 trays;

Superlift counterweight: 400t, 30 blocks on 1 tray.

Specifications

Cabin

The comfort cabin, fully closed, of steel frame structure, of low noise design, which is mounted with large windshield wiper, air conditioner, skylight, meters for all functions, control devices, fire extinguisher, air ventilator and radio/CD player.

Operator's seat and control levers are ergonomically designed. The cabin can tilt up to 20 degrees, enlarging the view of operator. Inside the cabin are the displays for video cameras installed to monitor winches. The cabin can be moved to front of superstructure, reducing transportation width.

Under carriage

The undercarriage consists of the center frame and two crawlers. The center frame and crawlers are connected by power-actuated pins, making it easy to assemble and dismantle. Swing drives are integrated.

Center frame

All welded of high strength alloy steel, designed for excellent resistance against bending and torsion.

Crawler frames

The crawlers are constructed from high strength alloy steel, torque resistant. Track shoes are made from high strength cast steel after heat treatment, 1500mm wide each. The tension of track can be adjusted by the extension of cylinders and secured by adding or reducing shims. The automatic centralized lubrication system is standard.

Crawler drives

Four wheel drive: each crawler is propelled by two variable displacement motors via closed planetary reduction gear running in oil; "normally-closed" hydraulic brake with spring. Both crawlers can stable travel at 1km/h at maximum, independently or reversely.

Hook

Model	Lifting capacity	Max. parts of line	Weight
750t	750t/400t	2×28	20.00t/15.7t
500t	500t/250t	2×19	9.27t/6.2t
150t	150t	11	5.51t
50t	50t	3	1.55t
15t	15t	1	0.70t

Note: a 750t dual pulley block hook can be converted to 400t single pulley block hook.

Specifications

Boom configurations

Boom combination

Boom is made of imported high tensile strength steel tubes, lattice structure, consisting of the following combinations:

H Heavy-duty boom

Boom length: 24m~84m

Boom : 12m boom foot section, 12m and 6m boom insert, 10.5m insert, 1.5m boom head.

HS Heavy-duty boom+superlift mast

Boom length: 36m~138m

Superlift structure: 36m superlift mast consisting of 12m foot section, 12m insert, 12m top section

HSD Heavy-duty boom+superlift mast+superlift counterweight

Boom length: 36m~138m

Superlift structure: 36m superlift mast consisting of 12m foot section, 12m insert, 12m top section; 0~400t counterweight

H/L Heavy-duty and light-duty boom

Boom length: 36m~102m

Boom: 12m boom foot section, 12m and 6m boom insert, 10.5m insert, 6m luffing jib tapered section, 12m and 6m luffing jib insert and 7.5m luffing jib top section.

HS/L Heavy-duty and light-duty combined boom+superlift mast

Boom length: 36m~150m

Superlift structure: 36m superlift mast

HSD/L Heavy-duty/light-duty boom +SL mast+SL counterweight

Boom length: 36m~150m

Superlift structure: 36m superlift mast, 0~400t superlift counterweight

HT Luffing jib

Boom length: 36m~60m; luffing jib length: 30m~102m

Boom:12m boom foot section, 12m and 6m boom insert, 10.5m tapered section, 1.5m boom top section

Luffing jib: 4.5m basic section, 12m and 6m luffing jib insert and 7.5m luffing jib top section

HTSD Luffing jib+SL mast+SL counterweight

Boom length: 42m~96m ; luffing jib length: 30m~102m,

Superlift structure: 36m SL mast, 0~400t SL counterweight

HZS Heavy-duty boom+heavy-duty jib+SL mast

Boom length: 42m~96m ; Fixed jib length: 12m, 18m ;

Offset angle: 12°, 20°

Superlift structure: 36m SL mast

HZSD Heavy-duty boom+heavy-duty jib+SL mast+SL counterweight

Boom length: 42m~96m ; Jib length: 12m,18m

Offset angle: 12°,20°.

Superlift structure: 36m SL mast, 0~400t SL counterweight

Specifications

HW Special boom for wind power

Boom length: 36m~96m

Combination: 12m boom foot section, 12m and 6m boom insert, 10.5m tapered section, 6m luffing jib tapered section, 2m special transition section for wind power and 5.5m special top section for wind power.

HWS Special boom for wind power+superlift mast

Boom length: 84m~114m ;

Combination: 12m boom foot section, 12m and 6m boom insert, 10.5m tapered section, 6m luffing jib tapered section, 2m special transition section for wind power and 5.5m special top section for wind power.

Superlift structure: 36m SL mast

Boom Configuration Symbols

1. H: Heavy-duty boom
2. HS: Heavy-duty boom+superlift (SL) mast
3. HSD: Heavy-duty boom+SL mast+SL counterweight
4. H/L: Heavy-duty and light-duty boom
5. HS/L: Heavy-duty and light-duty boom+SL mast
6. HSD/L: Heavy-duty and light-duty boom+SL mast+SL counterweight
7. HT: Luffing jib
8. HTSD: Luffing jib+SL mast+SL counterweight
9. HZS: Heavy-duty boom+heavy-duty jib+SL mast
10. HZSD : Heavy-duty boom+heavy-duty jib+SL mast+SL counterweight
11. HW: Special boom for wind power
12. HWS: Special boom for wind power+SL mast

Symbols of Working Condition

Safety Devices

Maximum boom angle switches

Electric safety switches prevent over -pull of maximum angles of boom, jib and masts.

Anti Two-Blocking device

When the hook lifts up to the maximum height it will touch the Anti Two-Blocking device. The hoist operation is being dis-engaged immediately, to prevent the hook touching the boom top.

The control relay initiates a buzzer alarm and the indicator will light up.

So the rise of the hook will be stopped automatically and the hook must be returned to the safe position again.

Boom backstop prevention device

The moment limiter can measure boom angle. In case it reaches the maximum angle the derricking operation is being stopped. In addition there is a an electric switch for final cut- out.

For unexpected back slash of the boom, heavy hydraulic mechanical boom stops are provided.

Moment limiter

The Moment Limiter is a micro-processor based device with display, containing the lifting programs matching with each programmed boom configuration and hook block.

It monitors, displays and initiates cut out of operations in case the movement enters a danger zone in terms of reach, tilting moment or structural load.

When the green light is lit, the lifting moment is shown by a green proportional bar on the display. This indicates that the load is less than 90% of the maximum rated capacity. When the yellow light is lit, the lifting moment is shown by a yellow proportional bar on the display. It tells the crane has reached a load which is between 90% and 100% of the maximum rated capacity. An intermittent audible alarm sounds.

When the crane reaches 105% of the maximum rated capacity, the red light comes in, the moment proportional bar turns red. A continuous alarm sounds, and all motions which would bring the crane into an even more unsafe state are disabled.

Tricolor load indicator

For the operator's and jobsite supervisor's easy understanding of the actual load situation, the crane is provided with a tricolor warning light. The color correspondents with the readings of the moment limited as mentioned above. In case of other malfunctions, the warning light may turn red too. The operator's cabin is also equipped with interphone for communication between operator and directing personnel.

Anemoscope

Anemometer, or the wind speed sensor, is mounted on the top of boom to measure wind speed which is shown in the moment limiter display.

Brake and locking device

The main hoist winch, auxiliary hoist winch, main derricking winch, and auxiliary derricking winch as well as slew mechanism are all equipped with brake and locking device.

Load sensor, angle sensor

Load sensors are mounted on mast, front strut for luffing jib, and superlift mast to measure

Safety Devices

pulling force. The actual value is being processed by the moment limiter, showing the actual weight of load.

The angle sensors are mounted on the boom foot, luffing jib foot, and superlift boom foot, as well as boom head and luffing jib head to measure the respective angle and calculate the ranges.

Gradienter

The gradienter is used for measuring the angle between crane body and level surface to ensure the machine can work in a leveled position as to meet the requirements.

Rope over feeding prevention system (final lap protection)

Final lap protection devices are mounted on main hoist winch and auxiliary hoist winch, preventing the drum from running out of rope. Three full laps will remain on the drum.

Swing and traveling alarm

The alarm will sound when the superstructure is swinging or the crane is traveling. Ground bearing pressure is timely monitored.

This system monitors the center of gravity and ground bearing pressure. It allows the operator to judge the bearing capacity of current ground, at the same time, it can alarm when the crane's max. ground bearing pressure reaches or exceeds the safe range of ground bearing, in order to reduce the overturn risk possibly caused by the ground subsiding.

Thunder prevention device

The electric system has a circuit protector, which can protect the damages of inner equipments caused by coming power or thunder over-voltage.

Note: It cannot prevent the damages from the direct thunder to the crane.

Emergency remote control system

When the crane is lifting, and the electric control system comes to failure, then it can start emergency remote control system to have an emergency operation for bringing back the crane in a safe status or area.

Black box

A data logger records the information is accumulated by the moment limiter. It processes data concerning some working conditions, including crane configuration, lifting moment, overload, boom angle, luffing jib angle, hoisting height, moment limiter code, working radius and limit switch, etc.

It used the read-out by the sensors, anemometer, gradient, as well as the working time and status of diesel engine. The black box can also record all the operations and instructions received from the machine operator. Based on the combined records a clear picture of status and occurred circumstances can be determined in case of error operation, overload action or malfunctions.

Notes for Rated Lifting Capacity Load Chart

Notes:

- 1.The load charts are calculated according to EN13000.
 - 2.The maximum allowable wind speed in the calculation of load chart is 9.8m/s. The estimation of sail area should be according to EN13000, and also take wind resistance coefficient 1.2 into account. When the sail area is large, please reduce the maximum wind speed to ensure a safe lifting.
 - 3.Lifting capacities are given in metric tons.
 - 4.The weight of the load hook and hook blocks as well as of the lifting tackle must be deducted from the lifting capacities.
 - 5.The working radii are measured from the slewing centerline.
 - 6.The subsoil must be even and of good bearing capacity.
 - 7.Hook block weight:

750t hook block.....	20.00t
500t hook block.....	9.26t
150t hook block	5.51t
50t hook block.....	1.55t
15t hook.....	0.70t
 8. A 750t dual pulley block hook can be converted to 400t single pulley block hook.
 - 9.The counterweights mounted on basic machine weight 245t, superlift counterweight 400t.
 10. Stability is minimum over sides.
 - 11.Subject to modification of lifting capacities.
 - 12.The data of this brochure serves only for general information. All information is provided without warranty. Instructions for the correct commissioning of the crane please take from the operation manual and the load chart book.
- ※ It should be understood that the listed rated lifting capacities are not finally decided results, they may vary with mechanical changes as subject of on-going product development.

Weight	6020Kg

Jib 12m insert B	×1
Length	12.22m
Width	2.55m
Height	2.44m
Weight	6050Kg

Jib 12m insert C	×2
Length	12.22m
Width	2.55m
Height	2.44m
Weight	6021Kg

Jib tapered section	×1
Length	6.22m
Width	3.14m
Height	3.06m
Weight	3535Kg

Transportation Dimensions and Weights

Unit: m

Jib top	×1
Length	8.37m
Width	2.72m
Height	3.10m
Weight	6099Kg

Luffing jib front strut	×1
Length	18.01m
Width	2.14m
Height	1.64m
Weight	7694Kg

Luffing jib rear strut	×1
Length	18.74m
Width	2.57m
Height	1.60m
Weight	112731Kg

SL mast foot	×1
Length	12.28m
Width	3.05m
Height	2.75m
Weight	16605Kg

SL mast top	×1
Length	12.43m
Width	3.34m
Height	3.30m
Weight	13654Kg

Transportation Dimensions and Weights

Unit: m

SL mast 12m jib insert	×1
Length	12.22m
Width	2.55m
Height	2.42m
Weight	7063Kg

Heavy jib head	×1
Length	2.38m
Width	3.05m
Height	3.42m
Weight	5053Kg

Boom head special for wind power	×1
Length	9.18m
Width	2.54m
Height	2.53m
Weight	6000Kg

Runner	×1
Length	3.15m
Width	1.09m
Height	1.17m
Weight	715Kg

Trailer	×1
Length	2.85m
Width	2.05m
Height	1.45m
Weight	1200Kg

Mobile pump station	×1
Length	1.00m
Width	0.56m
Height	0.96m
Weight	200Kg

Transportation Dimensions and Weights

Unit: m

15t hook	×1
Length	1.41m
Width	0.55m
Height	0.55m
Weight	700Kg

50t hook	×1
Length	2.17m
Width	0.86m
Height	0.42m
Weight	1550Kg

150t hook	×1
Length	2.38m
Width	0.94m
Height	0.86m
Weight	5510Kg

500t hook	×1
Length	3.86m
Width	2.31m
Height	1.32m
Weight	9260Kg

750t hook	×1
Length	4.10m
Width	3.36m
Height	1.00m
Weight	20219Kg

The transportation dimensions and weights of main parts in this brochure are the design value, the actual value may be a little different due to manufacturing choice.

Note

Note

A series of 20 horizontal dashed lines spanning the width of the page, intended for handwritten notes.

All data provided in this document are for reference only and may change without notice.
A crawler crane is a powerful piece of equipment. Only authorized people are allowed to plan, transport, rig and work with it.
Consult your local regulations.
