EX75URT

EX75URT

Moment Limiter

To prevent tipping-over due to overload, sounds buzzer and stops crane operation automatically (hook hoisting, boom lowering and boom extending) when reaching the limit. Indicates digitally the rated load, actual load, working radius, boom length and boom angle. Also, indicates the load factor.

Moment limiter

Working Range Limiter

Can set arbitrarily the boom angle (upper and lower limits) and maximum working radius. Stops crane operation automatically when exceeding the setting for smooth, dependable working near power lines and elevated structures.

Safe Load Indicator may vary per country.

Working range diagram

Dimensions

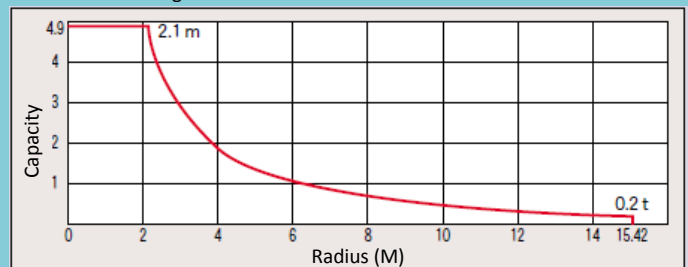

Unit: mm

Specifications

		EX75URT-5
Operating Weight	kg	9,800
Max lifting x Working radius	t X m	4.9 x 2.1
Max hook lift above ground	m	16.2 (4 falls)
Max lift below ground	m	36.0
Boom length	m	3.94 ~ 15.72
Boom hoist angle		-3° ~ 76°
Boom hoisting speed	s	13.5 (-3° ~ 76°)
Boom extending speed	s	11.78 - 20.0 (2~6)
Hoist rope speed	m/min	High 74 / Low 46
Hoist rope	mm x m	10 x 160
Engine		Isuzu A-4JG1
Engine output	Kw/min(PS/rpm)	40.5/1,900 (55.0/1,900)
Swing speed	min ⁻¹ (rpm)	2.5 (2.5)
Travel speed	km/h	3.3

Performance Diagram

These specifications are subject to change without notice. Illustrations and photos show the standard models, and may or may not include optional equipment, accessories, and all standard equipment with some differences in color and features. Before use, go through Operator's Manual for proper operation.

Based on: BS 1757:1986

DIN 15019-2

75% of tipping loads

HITACHI EX75URT-5 RATED CAPACITY CHARTS NOTES

Based on: BS 1757:1986
DIN 15019-2
75% of tipping loads

1. The rated loads listed are based on the condition that the machine is stationed on firm, level ground.
2. The rated loads are available over 360 degrees. The rated loads shown include the weight of all lifting attachments such as hook and bucket. The load to be actually lifted is the rated load minus the weight of all lifting attachments.
3. Travelling is allowed according and provided that:
 - surface must be firm and level
 - the boom is in travelling direction
 - speed is not above 0.4m/s (on a firm level ground)
 - the load is near the ground (0.5m) and secured against swaying
 - no other movements are allowed
4. Standard reeving for working 2 or 4 or 6 reeving's.
5. At windforce of 14m/s or more the operation must be stopped. By windforce of 15m/s or more the boom must be retracted to the minimum and lowered to the ground.
6. For the wind load area of the rated load is 1,2m² per 1000kg calculated.
