Articulating Crane

► 18/124 Articulating Crane

Featuring hexagonal booms for greater strength and stability, IMT® 18/124 articulating cranes have a max lifting capacity of 13,800 lb (6,260 kg) for the SL model and 14,265 lb (6470 kg) for the DL model. A horizontal reach of 71 ft 2 in (21.7 m) — as well as increased versatility, durability, and maneuverability — makes these compact cranes ideal for a number of demanding job tasks. Plus, they have the ability to stow within themselves, freeing up payload space for additional materials.

Hexagonal Boom Design

A wide hexagonal profile with large bearing surfaces ensures greater strength and stability for horizontal and vertical spans — even when working in extreme positions with long reaches. Plus, it's protected by powdercoat paint that never fades, flakes, or corrodes.

Internal Hose Routing

Fed internally through protective nylon drag chains or roller guides, all hoses are equipped with sturdy, high-pressure swivel couplings to prevent them from twisting.

Overbending

Overbending between the main boom and jib provides greater flexibility when working under power wires and more potential for high lifting in narrow passages. It also lowers the total height when the loader is stowed over the truck body.

Stow Bracket Innovation

The stow bracket is designed to secure the boom for transport position but not allow for bracket damage. Unlike systems with rigid fixed brackets, the "J" hook will pivot if an incorrect movement is attempted.
