

Specifications

Rough Terrain Crane

RTC-8030 Series II

30-ton (27.2 metric ton)

General dimensions	feet	meters	
Turning radius (4-wheel steer - centerline of tires)	18' 4"	5.58	
Turning radius (2-wheel steer - centerline of tires)	30' 3.5"	9.23	

Upperstructure

Boom

Patented Design. Boom side plates have diamond shaped impressions for superior strength to weight ratio and 100,000 p.s.i. (689.5 MPa) steel angle chords for lateral stiffness. Boom telescope sections are supported by top, bottom and adjustable side wear shoes to prevent metal to metal contact.

Microguard 434, Rated Capacity Limiter "RCL" - Standard; Graphic audio-visual warning system built into dash with antitwo block and function limiters. Operating data available includes boom length, boom angle, head height, radius of load, machine configuration, allowed load, actual load and percent of allowed load. Presettable alarms for maximum and minimum boom angles, max. tip height, max. boom length, swing left/right positions. Operator defined area alarm is standard. Anti-two block weight designed for quick reeve of hookblock.

Optional; External/internal load rating bar graph for quick operator reference.

Standard Boom — 30' - 78' (9.14 - 23.78 *m*) three-section full power boom.

Optional Boom - 29' - 91' 4" (8.84 - 27.81 *m*) four-section full power boom. Two mode boom extension - Basic mode (or mode 'B') is the full power, synchronized mode of telescoping all sections proportionally. The exclusive **A**-max mode (or mode 'A') extends only the inner mid-section to 49' 9" (15.16 *m*) offering increased capacities for in-close, maximum capacity picks.

Boom head - Four 10-5/8" (0.27 m) root diameter steel sheaves handle up to seven parts of wire rope. Rope dead end lugs provided on each side of boom head. Easily removable wire rope guards are standard. Boom head designed for quick reeve of hookblock.

Auxiliary lifting sheave - *Optional;* Single 10-5/8" (0.27 m) root diameter steel sheave with removable wire rope guard. For use with one or two parts of line off the optional auxiliary winch. Does not affect erection of fly or use of main head sheaves for multiple reeving.

Boom elevation — One Link-Belt designed hydraulic cylinder with holding valve and bushing in each end. Hand control for controlling boom elevation from -3° to $+78^{\circ}$.

Optional — 25' (7.62 m) fixed stowable one-piece lattice type.

Optional — 27' (8.23 m) offsettable stowable one-piece lattice type with lugs to allow for addition of second section. Can be offset 2° , 20° , or 40° .

Optional — 27' - 44' (8.23 - 13.41 m) offsettable stowable two-piece lattice type. Can be offset 2°, 20°, or 40°.

Cab and Controls

Environmental cab; isolated from sound and vibration by a neoprene seal. All windows are tinted and tempered safety glass. Sliding rear and right side windows and swing up roof window for maximum visibility and ventilation. Slide by door opens to 3' 0" (0.91 m) width. Six-way adjustable operator's seat with retractable seat belt. 4-way adjustable tilt/telescoping steering wheel. Hydraulic control levers (single-axis type) for swing, winches and boomhoist. Outrigger controls and sight level bubble also provided in upper cab. Foot controls for boom telescope, swing brake, service boom and engine throttle.

Cab instrumentation — Dash mounted gauges for hydraulic oil temperature, convertor temperature, oil pressure, water temperature, fuel and voltmeter.

Swing

Bi-directional hydraulic swing motor mounted to a planetary reducer for 360° continuous smooth swing at 2.8 r.p.m.

Swing park brake — 360°, mechanical disc brake mounted on the speed reducer. Mechanically controlled from the control console.

Swing brake — 360° , foot operated, spring released disc brake mounted on the speed reducer.

Swing lock — Standard; two position travel lock operated from the operator's cab.

Counterweight — Bolted to upperstructure frame. 7,800 lb. (*3538 kg*) ctwt.

Hydraulic System

Main pump — 2-section gear-type pump. Combined pump capacity 75 gpm (284 *lpm*). Mounted on transmission converter, powered by engine. Pump operates at 3,500 p.s.i. (24.1 MPa) maximum system pressure. O-Ring Face Seal (ORFS) technology throughout with hydraulic oil cooler standard.

Telescope / outrigger / steering pump — Single gear-type pump, 18 gpm (83.2 *lpm*) maximum. Mounted on engine, powered by engine through a direct mechanical drive. Pump operates at 3,000 p.s.i. (20.7 MPa) maximum system pressure.

Reservoir — 80 gallon (*303 L*) capacity. Diffuser for deaeration.

Filtration — Two 10-micron filters located outside hydraulic reservoir. Accessible for easy replacement.

Control valves — Five separate, pilot operated control valves allow simultaneous operation of all crane functions.

Load Hoist System

Standard — 2M rear winch with grooved lagging, two-speed motor and automatic brake; power up/down mode of operation. Bi-directional gear-type hydraulic motor, driven through a planetary reduction unit for positive operator control under all load conditions. Asynchronous parallel double crossover grooved drums minimize rope harmonic motion.

Optional — 2M front winch with twospeed motor and automatic brake, power up/down mode of operation.

Line pulls and speeds — Maximum line pull 11,948 lbs. (5420 kg) and maximum line speed of 452 f.p.m. (138 m/min) on standard 10.63" (0.27 m) root diameter grooved drum.

Additional Equipment — Standard

6 x 19 IWRC wire rope, controls for future addition of auxiliary winch, fire extinguisher, warning horn, mirrors, tilt/ telescoping and locking steering wheel, drum rotation indicators, electric windshield wiper, windshield washer, circulating fan, cup holder, foot throttle with throttle lock, audio/visual warning system, tachometer, sun screen, backup alarm, top hatch window wiper, audible swing alarm, 12-volt accessory outlet, and travel lights.

Additional Equipment — Optional

360° swing lock (meets New York City requirements), hot water cab heater, 30ton, 3-sheaves, quick reeve hook block, 8-1/2 ton hook ball, hoist drum cable followers, third wrap indicators, emergency steering system, air conditioning, amber strobe light, boom floodlight, mechanical boom angle indicator and rotation resistant rope, mechanical boom angle indicator, and pump disconnect

Carrier

8' 6" (2.59 m) wide, 11' 5" (3.48 m) wheelbase.

 $4 \times 4 \times 4 - (4$ -wheel steer, 4-wheel drive) — For rough terrain with limited turning area.

Frame — 100,000 p.s.i. (689.5 MPa) steel, double walled construction with integral 100,000 p.s.i. (689.5 MPa) steel outrigger boxes.

Axles

Front- Heavy duty planetary drive/steer type.

Rear- Heavy duty planetary drive/steer type.

Suspension

Front axle - Rigid mounted to frame. **Rear axle -** Fully independent 4-Link. Automatic axle oscillation lockout cylinders engage when upperstructure rotates past 2-1/2° of centerline.

Tires

Front and Rear

Standard — 20.5 x 25 (24-PR) Earthmover type.

Service — Fully hydraulic disc-type brakes at each wheel end with independent front and rear system.

Parking/emergency — Spring applied, hydraulic released, cab controlled, disc-type integral to the transmission.

Steering

Hydraulic front-wheel, four-wheel and "crab" steering: modes selected by toggle switch on dash. All modes fully controlled by steering wheel.

Transmission

Clark three-speed two range power shift transmission. Six speeds available forward and two reverse. Front axle disconnect for two or four-wheel drive.

Outriggers

Three position (fully extended, intermediate, and fully retracted) operation capability. Four hydraulic, telescoping beam and jack outriggers. Vertical jack cylinders equipped with integral holding valve. Beams extend to 19' 6" (*5.94 m*) centerline-to-centerline and retract to within 8' 6" (*2.59 m*) overall width. Equipped with stowable, lightweight 18.5" (*0.47 m*) diameter aluminum floats. Dash mounted controls and sight level bubble located in upperstructure cab. Confined Area Lifting Capacities (CALCTM) System - Outriggers may be extended to an intermediate position 13' 8" (4.17 m) for working in confined areas. In addition, capacities are available with the beams in the 7' 10" (2.39 m) fully retracted position. When the outrigger position levers (located on the outrigger boxes) are engaged, the operator can set the crane in the intermediate or fully retracted outrigger position without having to leave the cab.

Additional Equipment — Standard

Cab steps, four front and rear carrier steps, rear axle disconnect, non-skid safety strips on carrier deck (in upper), alarm, deep front storage, fenders, pontoon storage, full lighting package, 110 volt block heater, water/fuel separator on engine, front towing shackles and hook block tie back.

Additional Equipment — Optional

Rear Hydro-gas Ride[™] suspension, rear steer indicator, ether injection package, spare tires and rims, and front and rear mounted pintle hook.

Lifting Capacities

Hydraulic Rough Terrain Crane

RTC-8030 Series II 30-ton (27.2 metric tons)

Four–Section Boom Capacities

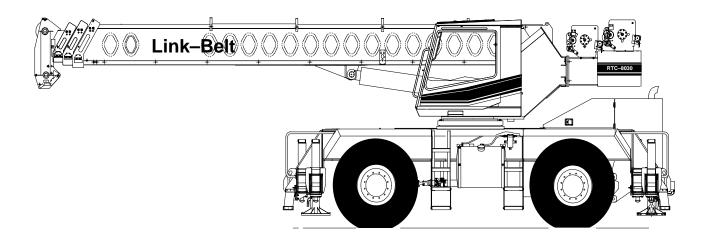

Boom and Fly Capacities for this machine are listed by the following sections.

Fully Extended Outriggers

- Working Range Diagram
- 29' to 49' 9" Main Boom Capacities, "A-max" Mode
- 29' to 91' 3" Main Boom Capacities, Basic Mode "B"
- 25' Fly Capacities, Basic Mode "B"
- 27' to 44' Fly Capacities, Basic Mode "B"

On Tires

- Working Range Diagram
- 29' to 49' 9" Main Boom Capaicities, "A-max" Mode
- 29' to 60' Main Boom Capacities, Basic Mode "B"

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

WARNING

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND RATED LIFTING CAPACITIES BEFORE OPERATING CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT

OPERATING INSTRUCTIONS

GENERAL:

- Rated lifting capacities in pounds as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
- 2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
- 3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards ASME B30.5 safety standards for cranes.
- 4. The rated lifting capacities are based on crane standing level on firm supporting surface.

SET UP:

- The crane shall be leveled on a firm supporting surface. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger pontoons or tires to spread the load to a larger bearing surface.
- 2. When making lifts on outriggers, all tires must be free of supporting surface. All outrigger beams must be extended to the same length; fully retracted, intermediate extended, or fully extended.
- When operating on tires over side, do not exceed 75° maximum boom angle. Loss of backward stability will occur causing a backward tipping condition.
- 4. When making lifts on tires, they must be inflated to the recommended pressure. (See Operation note 20 and Tire Inflation.)
- 5. For required parts of line, see Wire Rope Capacity and Winch Performance.
- 6. Before setting up on intermediate outriggers, retracted outriggers, or tires, refer to Working Range Diagrams and rated lifting capacities to determine allowable crane configurations.

OPERATION:

- Rated lifting capacities at rated radii shall not be exceeded. Do not tip the crane to determine allowable loads. For concrete bucket operation, weight of bucket and load shall not exceed 80% of rated lifting capacities. For clamshell bucket operation, weight of bucket and bucket contents is restricted to a maximum weight of 5,000 pounds or 80% of rated lifting capacity, whichever is less. For magnet operation, weight of magnet and load is restricted to a maximum weight of 5,000 pounds or 80% of rated lifting capacity, whichever is less. For clamshell and magnet operation, maximum boom length is restricted to 40 feet and the boom angle is restricted to a minimum of 35°. Lifts with any fly erected are prohibited for both clam and magnet operation.
- 2. Rated lifting capacities shown on fully extended outriggers do not exceed 85% of the tipping loads. Rated lifting capacities shown on intermediate extended or fully retracted outriggers are determined by the formula, rated load = (tipping load $0.1 \times 10^{-1} \times$
- Rated lifting capacities in the shaded areas are based on structural strength or hydraulic limitations and have been tested to meet minimum requirements of SAE J–1063 cantilevered boom crane structures–method of test. Rated lifting capacities in the non–shaded areas are based on stability ratings. Some capacities are limited by a maximum obtainable 78° boom angle.
- 4. Rated lifting capacities include the weight of hook ball/block, slings, bucket, magnet and auxiliary lifting devices. Their weights must be subtracted from the listed rated capacity to obtain the net load that can be lifted. Rated lifting capacities include the deduct for any fly stowed on the base of the boom. For deducts of any fly erected, but not used, see Capacity Deductions For Auxiliary Load Handling Equipment.
- 5. Rated lifting capacities are based on freely suspended loads. No attempt shall be made to move a load horizontally on the ground in any direction.
- 6. Rated lifting capacities are for lift crane service only.
- 7. Do not operate at radii or boom lengths (minimum or maximum) where capacities are not listed. At these positions, the crane can tip or cause boom failure.

- 8. The maximum loads that can be telescoped are not 17. For fly capacities with main boom length less than definable because of variation in loadings and crane maintenance, but it is permissible to attempt retraction and extension within the limits of the applicable load rating chart.
- 9. For main boom capacities when either boom length or radius or both are between values listed, proceed as follows:
 - a. For boom lengths not listed, use rating for next longer boom length or next shorter boom length, whichever is smaller.
 - b. For load radii not listed, use rating for next larger radius.
- 10. The user shall operate at reduced ratings to allow for adverse job conditions, such as: soft or uneven ground, out of level conditions, wind, side loads, pendulum action, jerking or sudden stopping of loads, hazardous conditions, experience of personnel, traveling with loads, electrical wires, etc. Side load on boom or fly is dangerous and shall be avoided.
- 11. Rated lifting capacities do not account for wind on suspended load or boom. Rated capacities and boom length shall be appropriately reduced as wind velocity approaches 20 mph.
- 12. When making lifts with auxiliary head machinery, the effective length of the boom increases by 2 feet.
- 13. Power sections of boom must be extended in accordance with boom mode "A" or "B". In boom mode "B" all power sections must be extended or retracted equally.
- 14. The least stable rated working area depends on the configuration of the crane set up.
- 15. Rated lifting capacities are based on correct reeving. Deduction must be made for excessive reeving. Any reeving over minimum required (see Wire Rope Capacity) is considered excessive and must be accounted for when making lifts. Use Working Range Diagram to estimate the extra feet of rope then deduct 1 lb. for each extra foot of wire rope before attempting to lift a load.
- 16. The loaded boom angle combined with the boom length give only an approximation of the operating radius. The boom angle, before loading, should be greater to account for deflection. For main boom capacities, the loaded boom angle is for reference only. For fly capacities, the load radius is for reference only.

- 91.25ft. and greater than 70 ft., the rated loads are determined by the boom angle using the 91.25ft. boom and fly chart. For angles not shown use the next lower boom angle to determine the rated capacity.
- 18. For fly capacites with main boom length less than 70ft. the rated loads are determined by the boom angle only using the 70ft. boom and fly chart. For angles not shown, use the next lower boom angle to determine the rated capacity.
- 19. The 29ft. boom length structural capacities are based on boom fully retracted. If the boom is not fully retracted, do not exceed capacities shown for the 40ft. boom length.
- 20. Rated lifting capacities on tires depend on tire capacity, condition of tires, and tire air pressure. On tire capacities require lifting from main boom head only on a smooth and level surface. Pick and carry operations are restricted to speed of 2.5 mph and creep. The boom must be centered over the front of the crane with two-position travel swing lock engaged and the load must be restrained from swinging. Lifts with any fly erected on tires are prohibited. For correct tire pressure, see Tire Inflation.

DEFINITIONS:

- 1. Load Radius: Horizontal distance from a projection of the axis of rotation to the supporting surface, before loading, to the center of the vertical hoist line or tackle with load applied.
- 2. Loaded Boom Angle: \measuredangle The angle between the boom base section and horizontal with freely suspended load at the rated radius.
- 3. Working Area: Area measured in a circular arc about the center line of rotation as shown on the Working Area Diagram.
- 4. Freely Suspended Load: Load hanging free with no direct external force applied except by the hoist line.
- 5. Side Load: Horizontal side force applied to the lifted load either on the ground or in the air.
- 6. No Load Stability Limit: The radius or boom angle beyond which it is not permitted to position the boom because the crane can overturn without any load on the hook.
- 7. Load Factor: Load applied at the boom tip which gives the same moment effect as the boom mass.
- 8. Creep: Crane movement limited to 200 ft. in a 30 min. period and not to exceed 1 mph maximum speed.
